Customer Reviews

If one is going to sell options for income, risk management is crucial. If we turn to the risk management chapter of this book, the authors commence by suggesting we view their advice as coming from a guy in a bar who is revealing to us the "secrets" of option selling, in hushed tones. Mmmkay. The "secret" that is imparted to us is that we can determine the best strike to sell by selecting an option priced around \$400. If we look for, say, a gold call priced at \$400, its strike relative to the price of gold will be much closer when gold is at \$500/oz. than when gold is at \$1500/oz. So this is a non-starter. The way to proceed is to use a multiple (or fraction) of the cost of a straddle, which automatically adjusts for the price and volatility of the underlying. This is not the end of the analysis, but it is a start. A few chapters later the author(s) discuss their best strategy evah, the 1:3 credit ratio spread, their "Maserati" of spreads. This serves as an excuse to announce

he or they have owned more than one Maserati. They give examples of such spreads using gold and soy. The only guidance they give about selecting strikes that one needs a reason to believe the market will not violate the short strike by expiration. They close the chapter by saying is it "difficult" to calculate the mid-trade profit zones. This may well be true for them: nowhere in this book did I find a chart of an option position P&L. For those unfamiliar with this, I have posted one with this review, including mid-trade profit zones. Any good options broker provides such charts. This allows you to assess your risk, and explore the effects of using different strikes and ratios - crucial for designing, say, a 1:3 credit ratio spread.
